

ABSTRACT OF THE DISCLOSURE

5 A process for tracking skilled-service rendered a patient by a provider at a treatment location including: generating, at the treatment location, at least one record of progress made toward each treatment goal identified for the patient and addressed by the provider during a session; receiving an input comprising each record of progress so generated, for storage as treatment record data at a host location. Data is stored in
10 searchable data fields for access and retrieval upon command. Using the treatment record data and a host processor, a patient report is automatically generated for submitting to an entity selected from the group consisting of a health care facility, a health care provider, an insurer, the patient, an entity authorized to receive records of the patient, and a record-keeping entity for the provider. Each treatment goal identified
15 is preferably based upon an evaluation of the patient's condition. The evaluation may take place prior to, or during, the current treatment session, by the same or another provider. A system and computer executable program code are also included.
